

ttbar — one pT < 3 GeV track, pT = 2.49 GeV, eta = +0.94, d0 = +2.84 mm, z0 = -162.4 mm — axes zoomed to its hits

hit order: legacy s = sqrt(x²+y²+z²) from the origin

hit order: ACTS reference — tracker_simhits.true_time (SimHit::time)

hit order: geometry order, truth-free (pixel→sstrip→lstrip; barrel r, endcap z along flight)
